# **GENERAL INFORMATION**

## **TRANSPORTATION**

Dulles and National Airports are less than an hour's drive away. Local and long distance truckers will be available, or sale manager will arrange.

## **HEALTH**

All cattle will be eligible for interstate and out-of-state shipping certificates will be furnished. All cows have received Lepto Vaccination annually before calving. All females in sale were calfhooed vaccinated for Bangs. All heifer calves were weaned September 24.

## **SALE LOCATION**

Front Royal Livestock Market, Front Royal, Va., Rt. 340 South of Front Royal 2 miles, to Rt. 619, West 2 miles, stockyard on left.

## **MOTELS**

There are many nice motels available in Front Royal, Va. The Sale manager will be glad to help arrange accommodations.

## **LUNCH**

Lunch will be available sale day.

## **SPECIAL REPRESENTATIVES**

BILL POWELL — Livestock Breeders' Journal; MIKE JONES — Angus Topics; CHILLY PEERY — Angus Topics; MIKE KESHAW — Shorthorn World; RANDALL UPDIKE — Virginia Dept. of Agriculture; ED HUFF — Virginia Dept. of Agriculture; C. D. SWAFFAR — Secretary American Shorthorn Association.

Dear Fellow Cattle Breeders:

The V.P.I. & S.U. Research Cattle at the Front Royal Research Station have been a great benefit to the cattle breeders in Virginia for many years through the information that was made available by the results of Performance Testing in both the Line Bred Herds and the Growth Herds.

We know everyone at V.P.I. & S.U. connected with this great herd of cattle regret to see these cattle dispersed. The increased demands on the budget forced the closing of the Beef Cattle Research Station at Front Royal, thus making necessary the sale of these Research Cattle.

A dispersal auction sale of the cattle was the only way all breeders would have an equal opportunity to purchase a part of this herd. We feel that this is a once in a lifetime opportunity to buy cattle that have the genetic improvement that can only be obtained through years of performance breeding.

This herd comes to sale in their working clothes so they sell to you in their natural, good breeding condition.

Contact us or our office if we can assist with your arrangements to attend, or in making your selections.

See you October 29.

*Dave Leonard*

*Christen F. Baker*

## BRIEF HISTORY OF FRONT ROYAL LINES

K. P. Bovard

Assoc. Prof. of Animal Breeding V.P.I.

The beef cattle breeding experiment conducted at the Front Royal station was basically the same in Angus, Herefords and Shorthorns. It was planned to compare two mating systems: selection vs. inbreeding with crossing of the inbred lines. During the 1950's many bulls were performance and progeny tested as prospective foundation sires. Those with outstanding records, and hence a strong chance of producing good progeny, were selected to establish the foundation stock to be used in the project. The inbred line formed from each sire so chosen was identified with a numeral from one to five, assigned as selected in time. Thus, the sire chosen to head line 1 was selected before the sire that headed line 2, etc., with four inbred lines established in each breed. Both Herefords and Shorthorns had an inbred line designated as line 5, since one line in each breed had to be discontinued.

The intent of the 4-6 year period for testing sires and producing foundation stock, 32 daughters by each foundation sire, was to provide an experimental base from which the two systems—selection and inbred—could develop from an equal starting point. The objective was met.

For the dispersal sale of the Front Royal herd, numbers of Shorthorns are largest, Angus next, and Herefords least. This is because in 1968, all Herefords except the growth selection line, were dispersed in order to accommodate the production of Angus and Shorthorn linecross calves and their progeny through at least two calf crops. The Herefords were chosen then as the breed to remove solely because that experimental breeding program was youngest, least developed of the three British breeds under study.

Many Angus from the Front Royal herd have been transferred to the Brooksville (Florida) station, operated jointly by the University of Florida and USDA. This was done to honor the initial cooperative agreement between the Virginia Station and USDA. In it, Virginia agreed to return to USDA a number of cattle equal to the number USDA initially contributed. Because the Brooksville Station has had a large Angus herd, their preference was for Angus transfers.

### Inbred Lines

A-1. Angus line 1, "Eileenmere" was headed by K. B. Eileenmere 21, 1103554, a strongly linebred to Eileenmere 85 was Eileenmere 32, and bred by Keefauver Bros., Jonesboro, TN. This line has average growth rate, fertility and conformation and least inbreeding depression, and had one inbred son used in the Angus growth line.

A-2. Angus line 2, "Rock Delus", was headed by the bull Rock Delus, 1404534, bred by C. T. Neale, Rocklands Farm, Gordonsville, Va. Rock Delus traced in several lines to Blackcap Stamp and Revolution breeding. His descendants showed fertility well above the average and hence attained higher levels of inbreeding; calves scored above average in conformation.

A-3. Angus line 3, "Elkton", with Blackstamp of Elkton 2nd, 1304552, the foundation sire. Blackcap Stamp was bred by Old Elkton Farm, Forest, Va. This line has shown the best growth rates of the Angus closed lines and has had a strong influence on the Angus growth line.

A-4. Angus line 4, "Blackwood Bandy", was headed by Blackwood Bandy of FR 4th, 1560476, bred at the Front Royal Station and sired by Blackwood Bandy of Amandale. His offspring have shown balanced growth and type scores and good fertility.

S-1. Shorthorn line 1, "**Statesman**", based on the bull Waverley's Statesman 2291825, bred by the U. S. Department of Agriculture at Beltsville and transferred to Front Royal in 1949. He was strongly linebred to two Sni-A-Bar bulls, Sni-A-Bar Ensign and Sni-A-Bar Type, both sons of Saul-ton Claymore.

S-2. Shorthorn line 2, "**Baron Rothes**", is based on the bull Baron Kinsman bred by the U. S. Department of Agriculture at Beltsville, Md. and transferred to Front Royal in 1950. He was line bred to Baron Rothes who traced to Calrossie Lord Rothes.

S-4. Shorthorn line 4, "**Britomac Prince Command**". The foundation sire for Shorthorn line 4, Britomac Prince Command, was purchased from Carl D. McKenzie of Arlington, Illinois as a calf in 1952. After a satisfactory performance test he was selected as foundation sire for Shorthorn line 4. He was a son of Air Raid Marshall and out of a daughter of Morphie Command.

S-5. Shorthorn line 5, "**Prince Eric**". The foundation sire, Prince Eric, was a son of Ringwell Prince Eric out of a cow with Calrossie Mercury breeding, and was purchased in 1951 from Berl A. Wilson, Champaign, Ill. Non-inbred foundation calves in this line had performance that was quite satisfactory. The inbred calves, especially at levels beyond 25%, did not respond well to this system.

**Growth selection lines.** In each breed the initial 32 cow growth selection line was established from four sets of eight half sisters, each set sired by one of the four foundation sires cited above as heading their respective lines. Selection in the growth lines was based solely on growth rate from birth to the end of the postweaning test at about 12 months of age. Each year the fastest gaining bull of each breed was selected from the FR postweaning performance test for two years' service in the respective growth selection line.

A-8. Angus line 8. "**Growth Selection**" was established in 1954 and has had calves in the late 1960's with weaning weights about 50 lb. above the herd average, and about 100 lb. above herd average at a year of age. Herd sires with marked influence on the Angus growth line include Black-cap Stamp of Elkton 2nd; Paigntonmere 49; Mighty of Wye; Finlay of Wye; and Belmonte MW 69.

H-8. Hereford line 8. "**Growth Selection**". The Hereford growth line was begun in 1961, and thus has been subjected to a shorter period of intensive selection than the growth lines of the other two breeds. But, fertility and growth rate have been well above the average with performance much like that seen in the older Angus and Shorthorn growth selection lines. The herd sire with greatest influence on the Hereford growth line has been Coastal Beau Rollo 9th, bred at the Georgia Coastal Plains Station, Tifton, Georgia. In recent years extensive use has been made of two R. W. Jones bulls and their sons.

S-8. Shorthorn line 8. "**Growth Selection**". This line was established in 1950 and is perhaps the oldest such "growth selection" line on record. It has consistently had the highest growth rates, both to weaning and on postweaning tests, of any Front Royal Shorthorn lines. This line is largely descended from Ransom Mercury, by Edellyn Reserve Mercury, bred by Wilson Bros., Lewisburg, W. Va. The descendants of Ransom Mercury have been so outstanding in growth that only three bulls of outside breeding have been added in 20 years. These were V.P.I. Wonder 2nd, Hi Ho Gambler Twenty Two and Weston Clipper 4th.

## COOPERATIVE EXTENSION SERVICE

### VIRGINIA POLYTECHNIC INSTITUTE AND STATE UNIVERSITY

Dear Friends and Colleagues:

It is with deep regret that we announce the dispersion of the Front Royal Beef Cattle Research Station herds. This move was forced on us by budget reduction.

The beef cattle breeding project at the Front Royal Station was begun 25 years ago in 1948 and has been carried on since as a cooperative effort between the Animal Science Research Division of the U. S. D. A. Agricultural Research Service and the Animal Science Department of V. P. I.

The Front Royal Station has made many contributions helpful to the beef cattle industry. No attempt will be made to list them here. It should be pointed out, however, that the beef cattle performance testing program in Virginia, culminating in the present Virginia B. C. I. A. program, was based on research done at Front Royal. This program, one of the first in the nation, has been influential in the development of similar programs in many states and a number of other countries.

The cattle will be presented to prospective buyers in practical working condition off pasture. Calves were weaned the last week of September and will have been on feed for about a month.

The cattle are sold without guarantee. Every effort has been made to eliminate any animals that may have any defect or injury affecting future usefulness. However, since this is a dispersion sale and since the fiscal rules of the state of Virginia make it extremely difficult to make refunds, it is not possible to guarantee the future performance of the cattle. The health status of the herd is stated elsewhere. All animals are eligible for interstate health certificates and a representative of the State Veterinarian's office will be present sale day to issue such permits. Pregnancy diagnosis will be announced from the box at the sale.

Many people have contributed to the success of the Front Royal project, professional, the farm and livestock crew, and the office force, too many to mention here. We would be negligent however if we did not pay tribute to the late Dr. Charles W. Kincaid, professor of Animal Science at V. P. I., and to Dr. Everett J. Warwich, of the U. S. Department of Agriculture, who were largely responsible for the planning of the project and its conduct through many years.

We believe that the Front Royal herds constitute some very useful cattle, many of these outstanding. It is our sincere hope that they will be profitable to their purchaser.

Most Sincerely Yours,

R. C. Carter  
Professor of Animal Genetics, V. P. I.  
Project Leader

B. M. Priode  
A. R. S. U. S. Department of Agriculture  
Superintendent

## TERMS AND CONDITIONS

1. Each animal will be sold to the highest bidder without reserve. Any known defect will be announced from the auction box.
2. The Auctioneer in charge will settle any disputes as to bids, and his decision on such matters shall be final.
3. Each animal will be at purchaser's risk as soon as sold; but it shall be the obligation of the management to see that the animals are fed and cared for, free of charge to purchaser until delivery to him. A reasonable period of time will be permitted to arrange shipment, if requested.
4. A certificate of registry and transfer will be furnished for each animal sold.
5. **HEALTH:** All cattle selling have been tested for TB and Bang's Disease within thirty days except that vaccinated animals not over 24 months of age are not required to be tested. Official calfhood vaccinated animals under 24 months of age may show titre if tested. All adult females will be pregnancy checked with information announced sale day.
6. Any changes from information of any kind in the catalog will be announced from the auction box and these will take precedence.
7. This is a complete dispersion sale, therefore all animals must sell at the halter with no further guarantee. The many calves at side of dam, and the many heavy springers verify the breeding ability of this herd. All known non-breeders, both bulls and females, have been eliminated from the sale.
8. Terms of sale are cash. All settlements will be made with the clerk of the sale immediately following the conclusion of the sale and before any cattle will be released. Checks are to be made payable to the Leonard Land & Livestock Ltd.
9. All above guarantees and terms shall constitute a contract between the buyer and seller and shall be equally binding upon both. Neither the Leonard Land & Livestock Ltd., nor any other person connected with the management of the sale, assumes any liability, legal or otherwise.
10. All persons attending the sale do so at their own risk. Neither the Leonard Land & Livestock Ltd. nor any other person connected with the management of the sale assumes any liability for the safety of the building or premises, or for the behavior of the animals.
